

Heard But Not Seen

The New

Ghost

Series Speakers

All new Ghost Series in-ceiling and in-wall lines that feature super flush, almost frameless speakers.

Once again we've broken the mold of cutting-edge speaker technology and innovation. Our latest innovation: the almost invisible Ghost Series.

Specializing in architectural speakers, we constantly go to great lengths to ensure that our speakers blend into the room's décor while still delivering unforgettable, life-like sound. The new Ghost Series pushes this concept to an all new level. A specially designed speaker housing hides the entire frame once the grill is installed. With this new design, the speaker blends seamlessly into the room's environment.

Quality that is heard but not seen.

The New *Ghost* Series Speakers

The all new Ghost Series tops the list for speaker innovation.

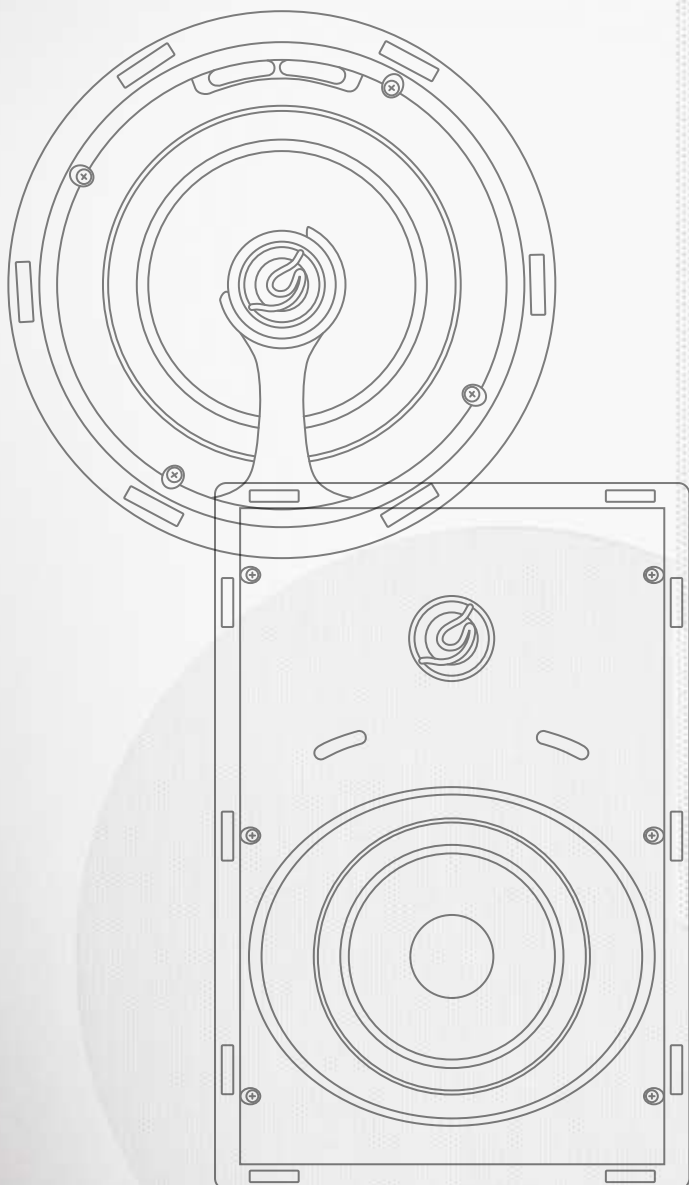

TruAudio speakers are known for amazing sound and ease of installation; now they pretty much disappear as well. The housing for the Ghost Series speakers features a special low profile lip embossed with high power magnets. The grill then attaches to the magnets and covers the lip. Once installed, no part of the speaker shows except for the grill. Since the grill has no frame, it

easily disappears and blends into the installation environment.

This series offers many different models including: round in-ceiling, rectangular in-wall, and square for either in-ceiling or in-wall. Models will be offered with traditional 8" or 6 1/2" woofers, as well as a 4" woofer which provides a speaker with a very small footprint.

The Ghost Series from TruAudio really is the solution to architectural speakers that will disappear into the room only to be heard, not seen.
