

# Stereo from One

## Dual Voice Coil Series

**Now you can enjoy high quality Stereo sound from one speaker.**

These versatile speakers are designed to fit a number of different applications including: hallways, bathrooms, closets, bedrooms, etc. In small areas where you want stereo sound but can't install two speakers, these models are the perfect choice.

All four models feature a single dual voice coil woofer and two 3/4" tweeters housed in single round speaker frame, allowing both the right and left channel from one speaker. Even though there are other stereo speakers available, our models boast plenty of unique features that improve performance and installation.

Both tweeters are mounted on a custom tweeter bridge that allows the tweeters to swivel independently. So if the speaker needs to be installed in a corner or near a wall, this feature allows the sound to still be directed out into the room. All models also feature deep speaker frames for improved bass, 4 to 8 ohm switching and the EZGrill.

**DV**

**These models are perfect for the smaller area that still needs stereo sound.**

These offer swivel Mylar tweeters on a polypropylene woofer. Both speakers also feature the proprietary EZGrill system.

**DVA**

**These models are also meant for smaller areas but offer upgrades in drivers material.**

Both speakers in this series boast swivel aluminum tweeters and an aluminum woofer. Both speakers also feature the proprietary EZGrill system.

*The EZGrill™ is just another way we make your job easier. Instead of the typical grill that pushes into the groove, the TruAudio EZGrill uses magnetic pull to attach the grill to the speaker. Specially designed magnets are placed in several locations around the inside frame of the speaker.*

*To install the grill, place it up close to the speaker frame, the magnetic pull will draw it into place. Once the speaker is installed, it takes about 3 seconds to install the grill. You know how long it takes to put in the typical grill.*
