

Forte A-BUS multi-room audio means having music throughout your home or office when ever and where ever you want.

Personalised Music

iPhone and iPod friendly, A-BUS personalises your home with a whole house music system. Until recently, this was hard to do. Everybody wanted their own music playing in their area with large floor standing or bookshelf speakers, amplifiers, CD players & tuners everywhere, creating a cabling nightmare and taking up what limited space you may have.

Practically Invisible and Energy Efficient

A-BUS systems take away the eyesore of large components and provide the ability to share sources (tuner, CD, iPod, etc) from one central area to multiple areas throughout the home. It gives each individual family member a way to express themselves with their own taste of music in their own private space and shared music in common living areas. What's even more impressive is a 4-room A-BUS system draws less electricity than one standard light globe.

Why is A-BUS/DIRECT so Different?

There is no need to have a keypad wired on the wall. Providing quicker installation, A-BUS/DIRECT systems are typically custom built-in while the house is being constructed but can also be installed during a renovation. Amplified speakers (both Indoor and Outdoor) with IR sensors on the grille are wired back to an A-BUS hub in the main living area, kitchen or home theatre room. A hand held remote which is magnetised and sticks to a fridge or fits securely into a wall cradle controls your favorite audio source component providing playback, stop, pause, etc.

Please see inside for packages...

Personalised music enjoyment for every family member

A-BUS provides 10-year limited life-time warranty when installed with Dataline cable
